1. **Group Number:** 015 - 01

2. **Group Name:** Kelechi Fan Club

3. **Group Members**: Iago Zamudio Troncoso, James O'Connor, Juan Castillero, Samra Redzic, Thabo Kelebeng, and Xander Chisholm cust_service@basicbites.com

4. **Application Name:** Gridly

5. **Application Description**:

Grdily is an application that is made for crossword enthusiasts who want to compete against others or simply improve their own skills. Player versus player live match where players race to finish a given crossword puzzle. Players will gain points depending on their wins and will be ranked on a leaderboard that will feature everyone's skills. If things get too tough, hints will be included, but using too many may dock your points, so be careful! Come join us in strengthening your skills in crossword puzzles!

In order to join our community, you must first sign up and create your profile picture. Once that is done, you are able to dive right in. Playing against others or simply wanting more practice, our platform provides a tight-knit community in which everyone seeks to get better and claim the top prize. Chat with your friends online while battling or simply say hi to others in the community. The Gridly team is eager to provide this space to make your crossword puzzle dreams come true.

6. **Audience:** English-speaking crossword enjoyers who want to compete against their friends. This is fit for people of all levels, be it a beginner or a master, everyone is welcome ot join.

7. **Vision Statement:** For crossword enthusiasts who want to challenge themselves and compete in fierce battles against others in crossword puzzles. Gridly is a platform that

allows you to strengthen your skills in crossword puzzles and battle against others for top place on the leaderboard. Come claim your seat in a fun and challenging game of crossword puzzles!

8. Version Control: https://github.com/iagozamudio/Group-Project-Gridly-CSCI3308

9. Development Methodology: ***Deadline for each week is on Monday before the weekly meetings with Kelechi***

KEY:

- Iago
- Samra
- Juan
- Tommy
- Xander
- Tommy
- James

Sprint 1:

Week 1

- ☐ Login page
- ☐ Registration page
- ☐ Basic SQL DBs (for week 1 needs)
- ☐ Recovery Questions for forgotten passwords
- ☐ Lobby Page
- ☐ Profile page (display the profile info from the database system without) → **Samra**
- ☐ Leaderboard page
- ☐ Puzzle single player page (without functionality / only grid format)

End-of-week 1 goal: Complete the website frame. Create a foundation for the complex tasks. Find a good task distribution workflow.

Week 2

- ☐ Single-player mode
    - ☐ Puzzle DB
    - ☐ Answer checking
- ☐ Basic Web-socket and multiplayer page (not full logic or functionality)
- ☐ Basic Live chat
- ☐ Admin page
- ☐ Leaderboard rendering
- ☐ Profile data rendering
- ☐ Game logic
- ☐ Game scoring/point system

End-of-week 2 goal: Website that works in unison with a simple single-player functionality and profile statistics/leaderboard.

Sprint 2: [Tasks will be re-assessed at this point]

Week 3

- ☐ Working 2-player game functionality with real-time updates
- ☐ Free hints(more hints = point reduction)
- ☐ Aesthetic CSS + HTML design

- ☐ Advanced game stats displayed

End-of-week 3 goal: Have a functional and good-looking web app that works for two people. Allow users to access their history/game statistics.

<u>Week 4</u>

- ☐ AI API integration
    - ☐ Randomly AI-generated riddles per match
        - ☐ Optionally: user prompted
    - ☐ AI Hints(score reduction)
- ☐ Chat box profanity checker
- ☐ Fix all bugs and make sure functionality

End-of-week 4 goal: Deliverable web-app. Everything works.

10. Communication plan: Weekly meeting with the group on Mondays from 12:15-12:30 pm. We will communicate on a Discord server and GitHub Posts/Issues.

11. Meeting Plan: TA Meetings on Mondays - 12:15 PM to 12:30 PM. Group meeting on Mondays from 12:31 - 1:30 PM.

12. Use Case Diagram:

14. **Extra Credit:** Identify at least five potential risks related to your project. For each risk, describe its severity and outline suitable mitigation strategies to address it.

1. Forgetting users' passwords. Severity: Medium. Mitigation: Create password hints to maintain simplicity and security. The hints will be created by the users.
2. - Having a limited number of riddles: the issue of repetition. Severity: High. Mitigation: Create a larger database. Optionally, we could integrate an AI API that creates riddles and answers for the crosswords.
3. - Protecting Data. Severity: High. Making sure to hash the password properly, permissions are properly set up.
4. Profane/rude chat usage. Severity: Medium. Solution: auto time added to reduce score
5. Problem: Cheating. Severity: Medium. Solution: Time doubled/tripled on external tabs to destroy score

read this

Day 1 Notes:

- Live leaderboard
- Different categories of games
- Focus on the crossword puzzle, a random list of questions and answers. Live questions of riddles and answers.
- Have CHATGPT generate a part of the answers and riddles
- Have a daily streak
- A crossword might be the easiest to implement.
- Everyone is comfortable with doing whatever.
