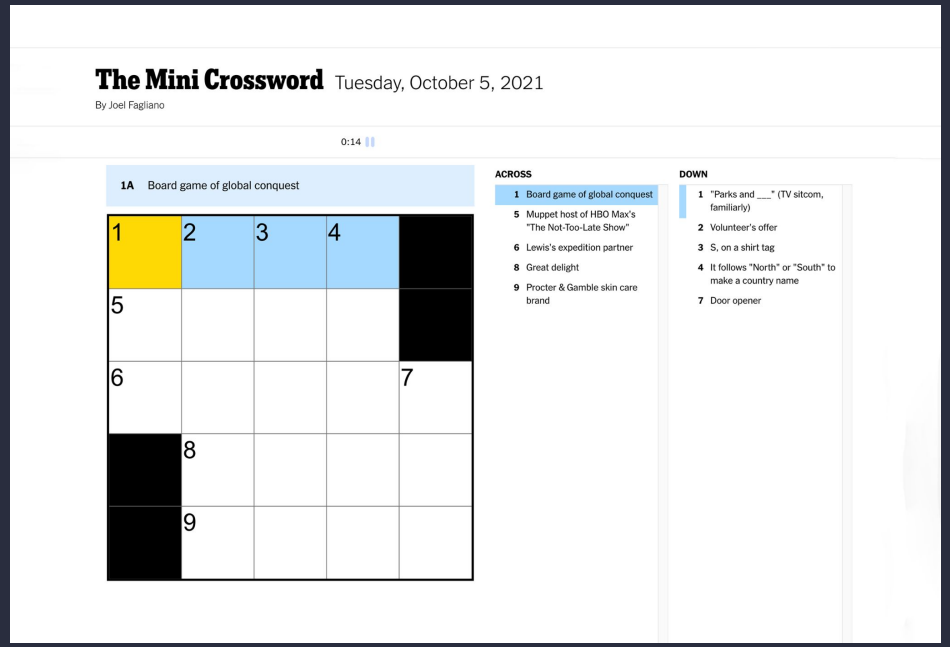
Gridly - Project Presentation

Team

Iago Zamudio Troncoso (iagozamudio)
James O'Connor (jamesoconnr)
Juan Castillero (JuanDCB05)
Samra Redzic (Sare9356)
Thabo Tommy Kelebeng (JoyfulTom)
Xander Chisholm (leBronzo1)

What is Gridly?

Inspiration



Missing:

- Connection and Competition - a way to interact and compete with other players

What is Gridly?

What we created

Profile
- Allows players to have an account which stores data

Multiplayer
- Two-players can play at the same time

Leaderboard
- Player can compete for score and time placements

Replayability
- Unlike the NYT, users can play Gridly multiple times per day.

Project overview

Gridly is a crossword puzzle platform where players can test their crossword solving skills against other players. It allows for both individual and competitive play (multiplayer). The website is currently up and running.

Summary of Features

01. **Single/Multiplayer**

02. **Leaderboard**

03. **Account system**

Challenges

01. **Deciding the initial scope of the project. Determining what to implement and what to leave as potential ways to expand in the future.**

02. **Communication. Having a six person group meant that we needed be clear and articulate around work**

03. **Managing to work independently and integrate our work. Connecting them together properly took some time.**

Let’s Demo

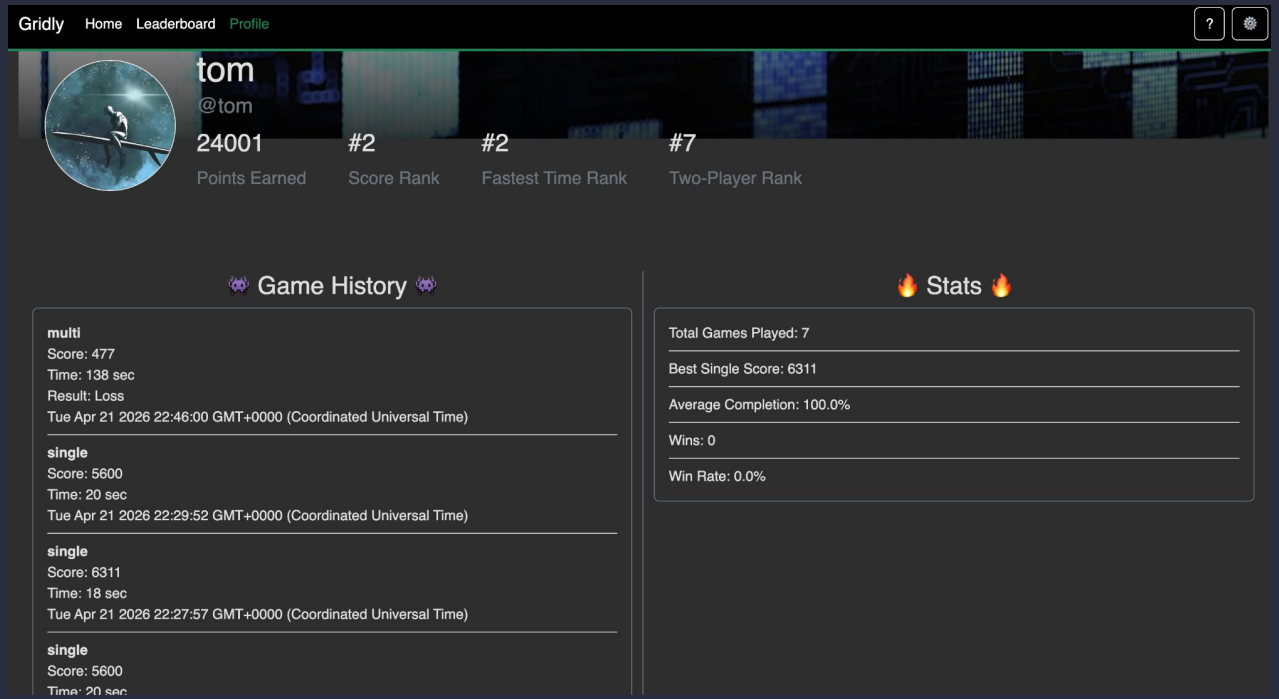
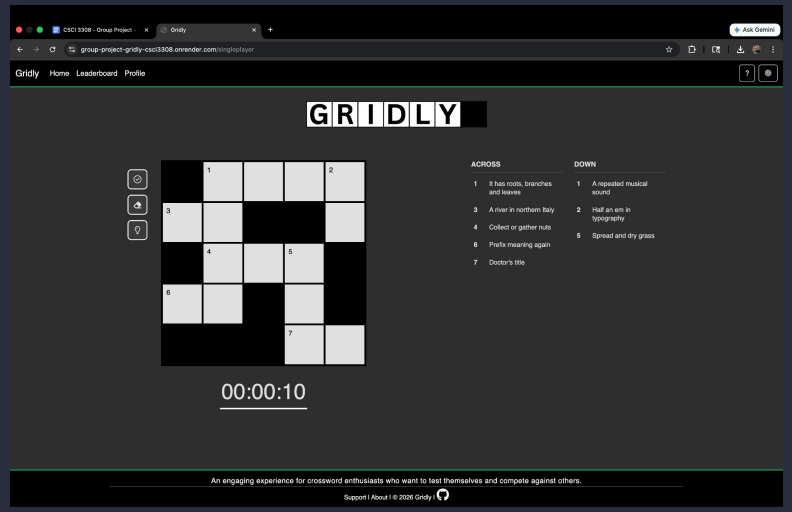
Ready for another round of Gridly? Jump into a solo puzzle or challenge someone head-to-head.
Single Player
Two Player
Player Snapshot
Challenges:

Profile Page



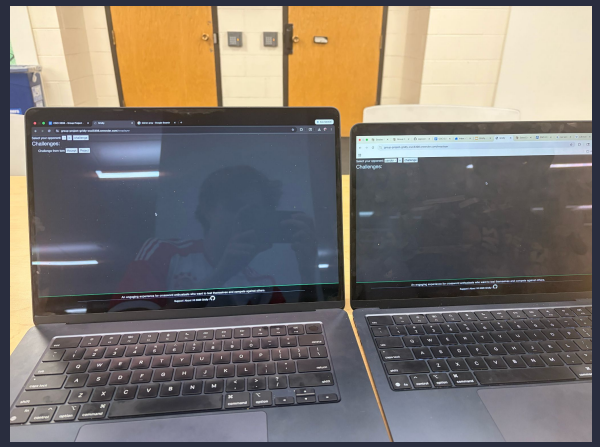
- **Player can customize their profile with a profile picture.**
- **Game history and stats displayed to player.**
- **Points Earned, Score Rank, Fastest Time Rank and Two-Player Rank displayed.**

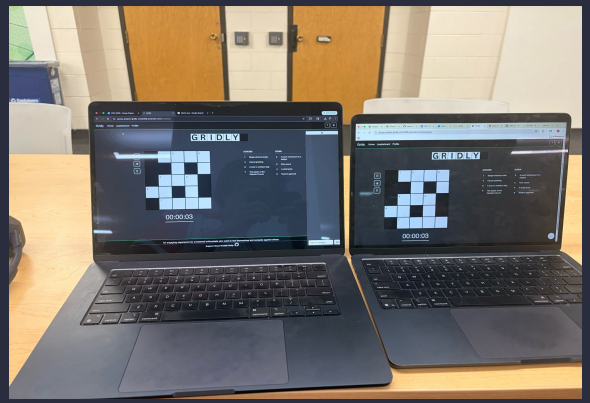
Game Generation



- Fills out first word in the middle
- Loops through if can be placed
- Code will run again from scratch if less than 9 words

Web Sockets





- Player can send request to other player to start game
- Two players can match up and winner gets more elo
- Live count of squares filled updated throughout game

Technical Details(tech stack/meeting/development)

Tool Rating(1-5)

- 4 Project Tracker (GitHub Project Board)
- 5 Database (PostgreSQL)
- 3 IDE (VSCode)
- 3 UI Tools (Drawing Tablet Application, HTML, HandleBars, Bootstrap)
- 4 User Interaction (Javascript)
- 4 Application Server (Node.js and Websocket)
- 3 Deployment environment (Render)
- 2 Testing tool (Mocha, Chai)
- 3 Framework (Express in Node)
- Our development methodology: Peer Code Reviews and Scrum Sprints
- Met every week on monday as a group (in-person and over zoom) and with TA and communicated via slack

Future Scope

01.

Add increased support for users.

02.

Potentially an admin page.

03.

Custom puzzle creation.

04.

AI chatbot for questions.

Any questions? Ask away!

Thank you
